LIMITED
INNOVATIVE DOOR HARDWARE SOLUTIONS

DOCUMENT Q PRODUCTS

TESTING

Introduction

Prided on product excellence and innovation; UAP Limited, have an unrivalled reputation for the products we supply and the service we provide.

As a company we work with industry leading, highly respected manufacturers, importing the very best goods from around the globe.

We take care of our customers by providing solutions to ANY door hardware requirements. This includes sophisticated door and window security solutions and attractive decorative furnishings; both for commercial and domestic needs.

At UAP we are constantly striving to improve on the products we already supply as well as develop new, pioneering ranges and practical product solutions.

With an in house testing centre and product developer, each stage of the development process is thorough, from the initial design right down to the final product.

In house 3D printing technology allows for further and more precise advancement of our products which are then expertly manufactured and put through stringent testing conditions using in house test equipment – ensuring all products are designed to the highest standards.
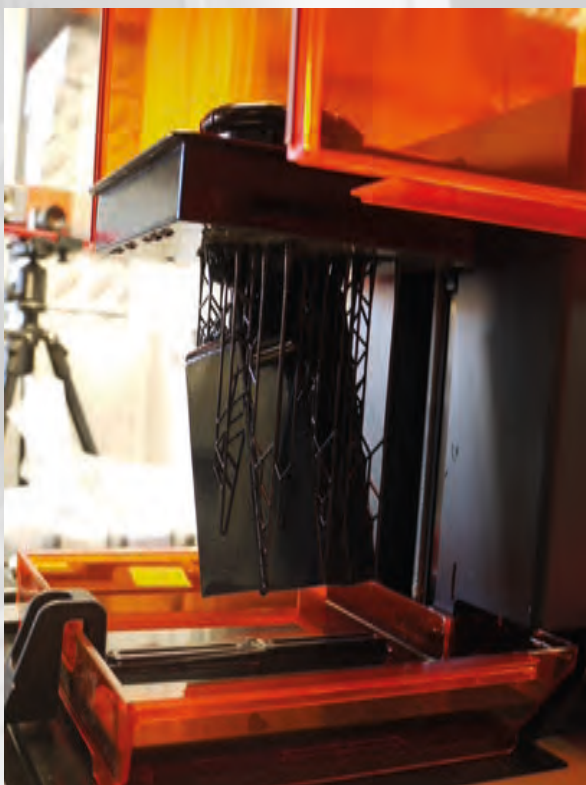

All Weather Machine

When placed in the all-weather machine a product is subjected to conditions including high UV exposure using a Xenon Arc Lamp which will accelerate UV degradation and measure how well a product can last in extreme conditions. Other conditions such as rain and extreme heat can be generated by the machine to expose products to all kinds of environments.

Salt Spray Test Machine

This machine tests the corrosion resistance of products such as letter plates, cylinders, door knockers, door letters/numerals, door viewers, handles and escutcheons.

The salt spray cabinet produces a corrosive environment, by releasing a dense saline fog into the chamber which the products are exposed to. This creates accelerated corrosion to the product and allows us to test how well the product would stand up in harsher environments.

Products are tested for differing lengths of time depending on the standard requirements; 480 hours for a 5 year guarantee or in the case of Nanocoast products they are tested to 2000 hours, and we give a LIFETIME coating guarantee.

UV Sunlight Test Machine

Used to test the colourfast of plastic and anodised products, the UV machine measures the stamina of a products finish, testing how quickly it will fade in sunlight. It does this using UV lights which the products are left under for 2000 hours.
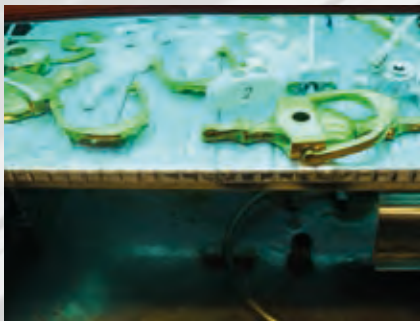

Tensile Strength Test Machine

The tensile strength machine tests the resistance of a material to breaking under tension. It is used to see how well our door chains perform when pressure is applied to them, and makes sure the chains exceed 200Nm of force.

Letter Plate Flap Machine

By replicating the action of opening and closing the letter plates flaps, the machine can determine the durability of the hinge mechanism on the product.

The flaps are repeatedly opened and closed to ensure they can withstand thousands of openings without snapping or breaking, promising a product that will last much longer than others in the industry. The process is repeated to 100,000 repetitions – with only 15,000 required by testing standards. Tests are performed in accordance with BS EN 13724:2013.

Cylinder Cycle Machine

This sophisticated machine tests the rotational operation of cylinder locks, ensuring a lock will continue to function even after being used in thousands of openings. It replicates the action of a key being inserted into the cylinder and it being turned, just as a product would be operated when fitted into a door.

The product is tested to 100,000 repetitions to ensure it continues to function even after thousands of turns. It allows UAP to perform tests in accordance with BS EN 1303:2015 standards.
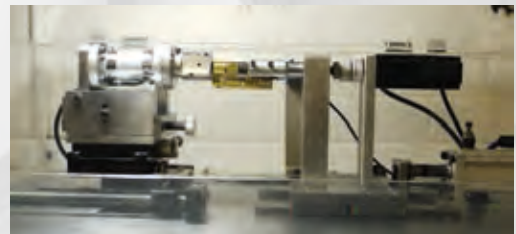

Door Handle Cycle Test

The machine imitates the action of the door being pushed down in an opening and repeats this 100,000 times, to test its durability. The axial and rotational operation of lever handles is being tested to make sure in can withstand numerous openings and remain functional. UAP perform the test in accordance with BS EN 1906:2015.

120 Degree Viewer Test

In order to meet Secured by Design specifications a door viewer must have a viewing angle of 120 degrees (60 degrees on either side). The test is conducted in accordance with DHF TS002:2009 standards.

Brands

UAP LIMITED

UAP is one of the most widely recognised door hardware brands in the industry. The UAP brand consists of door knockers, door viewers, letterplates, door and window handles, numbers and letters, door locks, euro cylinders, mortice locks, window security and door security products. Every product is innovatively designed and constantly developed to ensure every product is of the highest quality and meets every customers requirements.

More information can be found at www.uapcorporate.com

MAX6MUM SECURITY

MAX6MUM SECURITY is a range door hardware and security products aimed for the retail market. The range consists of blister packed high quality architecturally specified and low cost products that anyone can install to improve home security. MAX6 is fully backed by a huge marketing campaign featuring our brand mascot 'Max' which is perfect for any trade counter or hardware shop.

More information can be found at www.max6.co.uk

TradeLocks

Tradelocks is one of the largest locksmith brands in the UK, providing locksmith tools to gain entry to a number of different domestic locks, cars and safes. Tradelocks supplies domestic locksmiths, auto locksmiths and safe locksmiths, as well as a number of auto recovery companies and government agencies.

More information can be found at www.tradelocks.co.uk

GENUINE LISHI THE PROFESSIONAL'S CHOICE — TOOLS BUILT FOR LIFE

Genuine Lishi is one of the most recognised and trusted vehicle opening tool brands in the World. Genuine Lishi is supplied and distributed to over 80 countries, and is high sought after due to its high quality and innovative products, including the brand new NightVision 3 in 1 picks and decoders.

More information can be found at www.genuinelishi.com

48 Hour Delivery Policy*
Our 48 hour delivery promise is targeted on all stocked products.

5 Year Product Guarantee
All products inside this brochure come with up to a 5 year guarantee except the Nanocoast® range which is a lifetime coating guarantee.

Salt Spray Testing
All of our products in this catalogue have been salt spray tested to ASTM B117 for 480 hours, apart from the Nanocoast® range which has been salt spray tested for 2,000 hours.

Anodised Coatings
The anodised coating used on our Aluminium products conform to ISO 7599 AA15 and comes with a 10 year colour fastness guarantee.

Guarantee
The guarantees mentioned in this brochure are for guidance only and unless otherwise stated, only relates to products being used in inland areas which are defined as 25 miles from the coast, or 5 miles from highly polluted industrial areas. Please ask your UAP account manager for copies of the guarantee wording covering your product of interest and please talk to your account manager about any specific application you might have.

*48 hours means 2 working days. Product colours may vary slightly from the actual photograph.

Document Q is the Approved Document published by the Secretary of State; setting out the guidelines on how to meet the requirements of the Building Regulations 2010 for England. It covers the requirements in respect to security of 'easily accessible' doors and windows.

The Document came into action on the 1st of October 2015.

Who is responsible for the compliance?

The agent, designer, builder or installer responsible for the work being done is also responsible for compliance with the Building Regulations. The building OWNER may also be responsible for ensuring the work complies. If building work does not comply then the owner may be served with an enforcement notice.

Document Q: Security

What does the Building Regulations state and what Document Q sets out?

Document Q is concerned with security of 'easily accessible' doors and windows on NEW Dwellings. It deals with the requirements of Part Q of Schedule 1 of the Building Regulations 2010 known as Q1. The requirement (Q1) states: reasonable provision must be made to resist unauthorised access to:

a) Any dwelling
b) Any part of a building where access to a flat can be gained in that building

To meet the requirements, anything considered an easily accessible door or window must prove to be able to 'resist physical attack by a casual or opportunist burglar.' The Secretary of state says specified doors and windows must prove to be both 'sufficiently

robust' and 'fitted with the appropriate door hardware' to do this. Document Q gives guidance to building professionals on what is deemed sufficiently robust and what door hardware is considered necessary to meet these regulations on both doors and windows, as well as which doors and windows need to comply. The guidelines only apply to work started after the 1st of October. Any work subject to a building notice, full plans application or initial notice submitted before the 1st do not apply as long as the work is started on site before the 1st of October 2016.

What does the Document apply to?

All 'easily accessible' doors and windows that provide access in any of these circumstances:

a) Into a house from the outside
b) Into parts of a building, that contains flats, from the outside
c) Into a flat from the common part of a building

What is considered an 'easily accessible' door or window?

An entry point is considered easily accessible when any part of either the door or window is within 2m vertically of an easily reach level surface; such as the ground, an access balcony or if it is on basement level. A window which is within 2m vertically of a flat or sloping roof that is within 3.5m of ground level is also deemed easily accessible.

Document Q: How to Meet Regulations

To ensure easily accessible doors and windows are compliant, you must guarantee they are deemed a secure doorset or window. If they have been tested and proved to meet security standards of British Standards publication PAS24:2012- this is considered compliance.

Other standards that provide a similar or better performance may be accepted and these are listed in the Approved Document. If it is a bespoke timber doorset which incorporates features that prove to reduce crime and fits within the specific dimensio highlighted in the Document, then it is also considered compliant to the document.
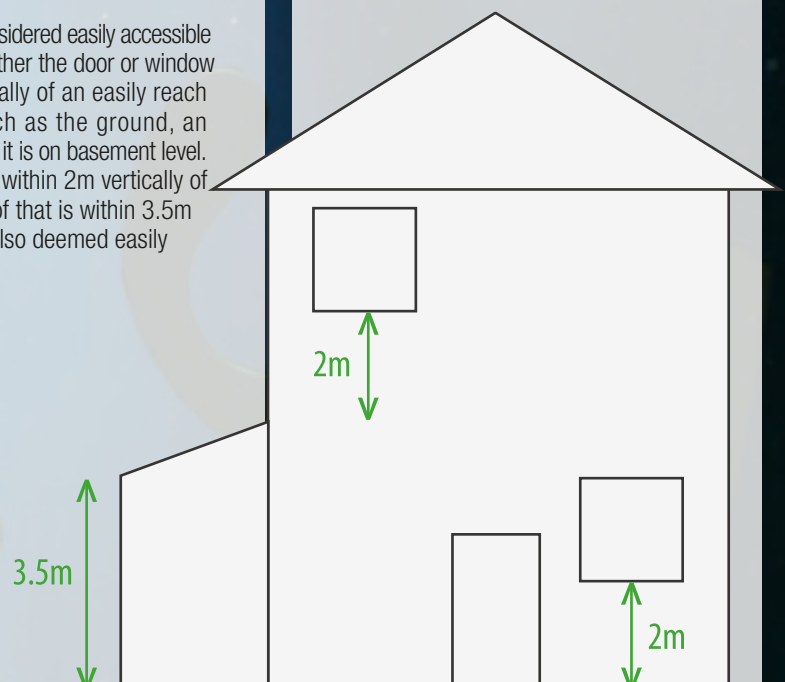

Door Viewers
(Spyholes)

Document Q States:

Door viewers are now considered essential hardware. They should be used when the main door for entering a dwelling does not have any other means of seeing a caller; so if there is no glass on or beside the door.

Door viewers are a great security accessory, as no door should be opened without first checking who in on the other side. Each door viewer has gone through rigerous testing, and some have been awarded 'Secured by Design' by the Association of Police Officers. Made with a solid brass body and comprising of 3 plastic lenses, each door viewer ensures to give crystal clear performance for years of safe, secure use.

We have a range of door viewer sizes, in a range of 6 different colours. As standard, the door viewers are salt spray tested for 480 hours, and come with a 5 year inland coating guarantee. Polished brass and chrome door viewers come with a PVD head, which helps prevent rust developing in coastal areas. Polished brass, chrome, black and white door viewers also come with a free privacy cover.

![UAP Limited logo] Anti–Vandal™ Letterplates

Anti-Vandal

As the brushes are at the front, it acts as a visual deterrent against vandals who want access to the cavity to place unwanted items in there such as fireworks etc.

Document Q States:

If a door includes a letter plate it must have a maximum opening of 260mm X 40mm and must be both designed and located in such a way that impedes anyone inserting their hand or any device to hook or remove keys – for example by incorporating a flap or another access restricting feature.

Our Anti-Vandal letterplates are one of the only letterplates in the industry to be awarded 'Secured by Design' certification. Each letterplate has been engineered to provide features not found in any other letterplates, each incorporating the following features:

Anti-Vandal™ – We are the only letterplate in the industry to have the brushes outward facing on the exterior flap. By doing this, it has three huge advantages:

Draught Proofing – It allows for better draught installation, as it stops the draught at the point of entry instead of allowing it to get into the central cavity before trying to stop it.

Navigation – It makes it a lot easier for letters to be posted through the door as the brushes can easily be located therefore stopping letters being scrunched up.
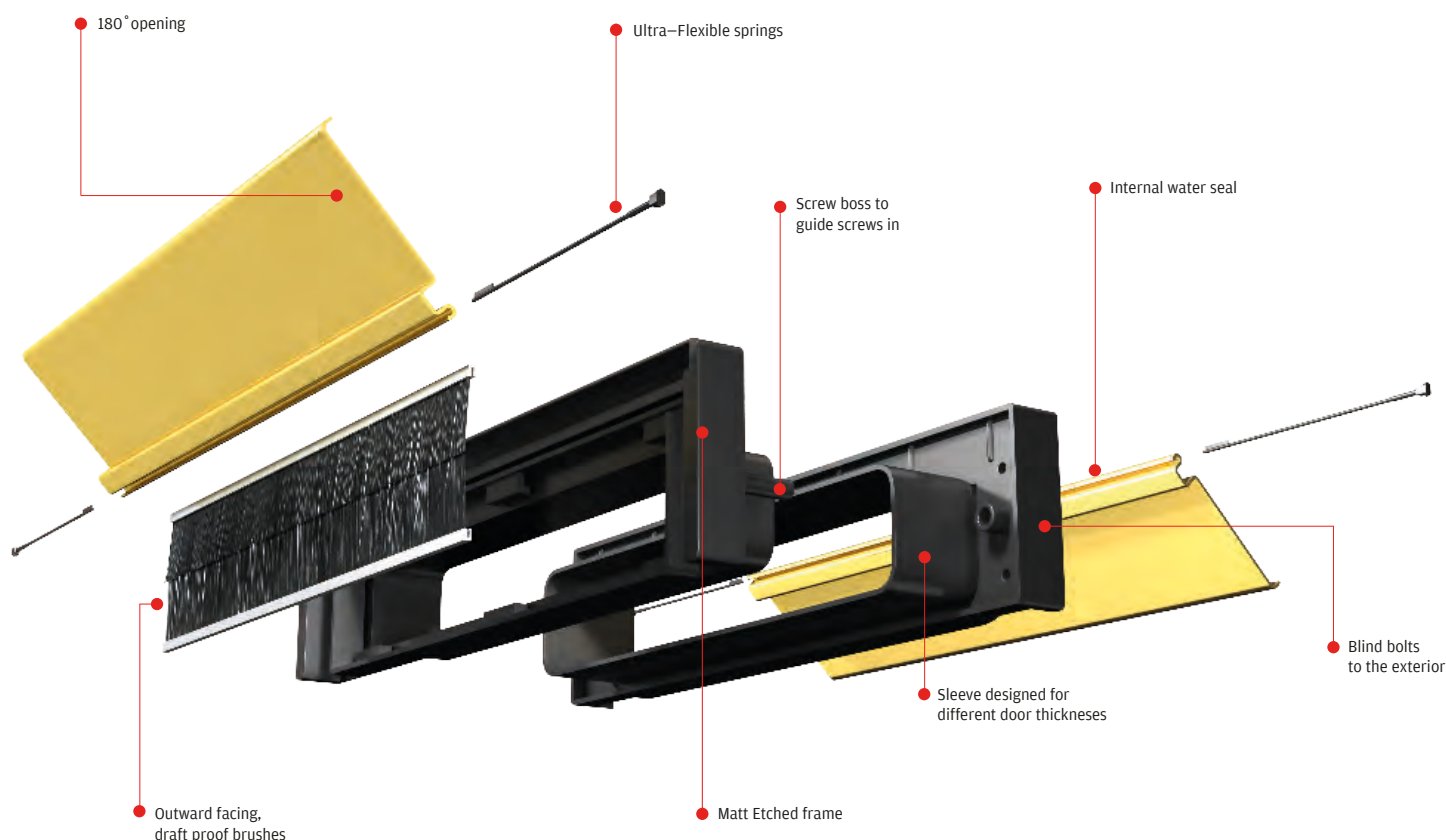

Limits Access to the Cavity – As the brushes are at the front, it acts as a visual deterrent against vandals who want access to the cavity to place unwanted items in there such as fireworks etc.

Anti-Snap – All of our letterplates open 180 degrees, meaning that they won't snap off when they are opened too far (the problem with all 90 degree opening letterplates).

Each letterplate has ultra-flexible springs which can withstand thousands of openings without breaking. An internal water seal also prevents water getting into the door, as water travels along the cavity and down the side of the letterplate, meaning post does not get wet.

Anti-Burglar – Blind bolts to the exterior of the letterplate prevent the outer frame being unscrewed from the door externally.

Anti-Scratch – The plastic frame letterplates have a matt coated frame. This helps to conceal any scratches that may be caused by screwdrivers during installation, which are visible on shiny finishes.

180˚ opening

This product is aimed at the fabricator who wants to offer a high quality, ergonomically designed handle range but who doesn't want to get involved in fitting a cylinder guard. This fit and forget handle is packed with state of the art features, and can be used by the professional installer offering a security upgrade service.

Features:

Anti-Drill Resistance – The integrated cylinder guard helps protect your door from drilling attacks

Easy Fitting and Attack Resistance – The self–adhesive tabs ensure not only easy and secure fitting also further strengthen the door handle against possible attacks

Water Penetration Resistance – The self-adhesive tabs also aid in preventing water from penetrating between the door and handle, thus preventing corrosion, discoloration, and premature aging

Cylinder and Handle Snapping Protection – Once fitted onto the door, the door handle is developed so as to help protect from the most common break in methods, cylinder and handle snapping

- 2 star Kitemarked
- Integrated cylinder guard to resist drilling attacks
- Protects against cylinder snapping
- Self–adhesive tabs add to the attack resistance and assists easy fitting, as well as aiding water penetration resistance
- Highly durable
- Made from aero-space grade aluminium for gold anodised, silver anodised, black and white finishes
- Made from 304 grade stainless steel for PVD gold, mirror polished and satin stainless finishes

Made from aero-space grade aluminium for gold anodised, silver anodised, black and white finishes

Sprung and unsprung, spring can be easily removed

Made from 304 grade stainless steel for PVD gold, mirror polished and satin stainless finishes

Blind cylinder end works with UAP cylinder range (must use 30/35 (65mm) cylinder on 44mm doors)

Ergonomically shaped handle

Self–adhesive tabs add to the attack resistance and assists easy fitting, as well as aiding water penetration resistance

2* Cylinder Guards

The TS 007:2012 2 Star cylinder guard offers the most affordable way to three star security, when combined with a UAP Zero Lift 1 Star Cylinder. Cylinder guards are ideal for door manufacturers and fabricators who want a low cost, high quality route to Secured by Design 3 star status.

The Patent Pending Cylinder Guard offers flexibility as it can be used with any handle and will fit almost any Euro Cylinder.

Designed to combat drill attacks, it has many patented features not found on other cylinder guards:

Anti-Drill Design—shaped body prevents drill attacks

Low cost route to 3 star status

Unique Hardened Steel Anti Drill Plate

Pointed Anti-Drill High Tensile Steel Bolt

2 versions covers 95% Multi Point Locks in the market

Patent Pending Anti-Axial Rotation Lugs

UAP High Security Secured by Design Narrow Door Chains

Document Q States:

These doors must now also have a door chain or limiter, when it is appropriate. Full information on which standards are compliant and other details on meeting requirements are listed in the Approved Document under doors or windows.

Made from steel, the door chains are made extra strong with individually welded links, and can withstand an exceeding breaking force of 200Nm. The door chains consist of three parts; the chain, the holder and the receiving plate and also comes with fixing screws.

Features
— Exceeds breaking force of 200Nm
— Extra strong individually welded links
— Made from steel
— Fits any door
— Up to a 2 year guarantee

Identity Card Entry Slots

The ID Card Entry Slot is the ultimate security accessory for protection against rogue traders and bogus callers.
It enables the homeowner to check the ID of a caller without having to open the door; they simply lift up the sliding latch on the inside to allow the caller to slip the card through.

The ID Card Entry Slot allows the occupier to receive the ID Card easily without the awkward fumbling that occurs when trying to receive it through the letterbox. It also enables the occupier to thoroughly check the ID without the pressure of the caller standing in the doorway.

This ID Slot also acts as a visual deterrent to would 'be-criminals; it shows them that the homeowner is aware of and prepared for bogus callers.

UAP Window Closer / Sash Jammer

Sash Jammers are a must have security device for uPVC windows and doors. They offer quick and low cost addition security for the home. The sash jammers can be fitted to doors or windows which open in or out, preventing the levering of the sash or door leaf. With just a twist of the sash jammer handle, it is secured over the frame, offering resistance to deter forced entry.
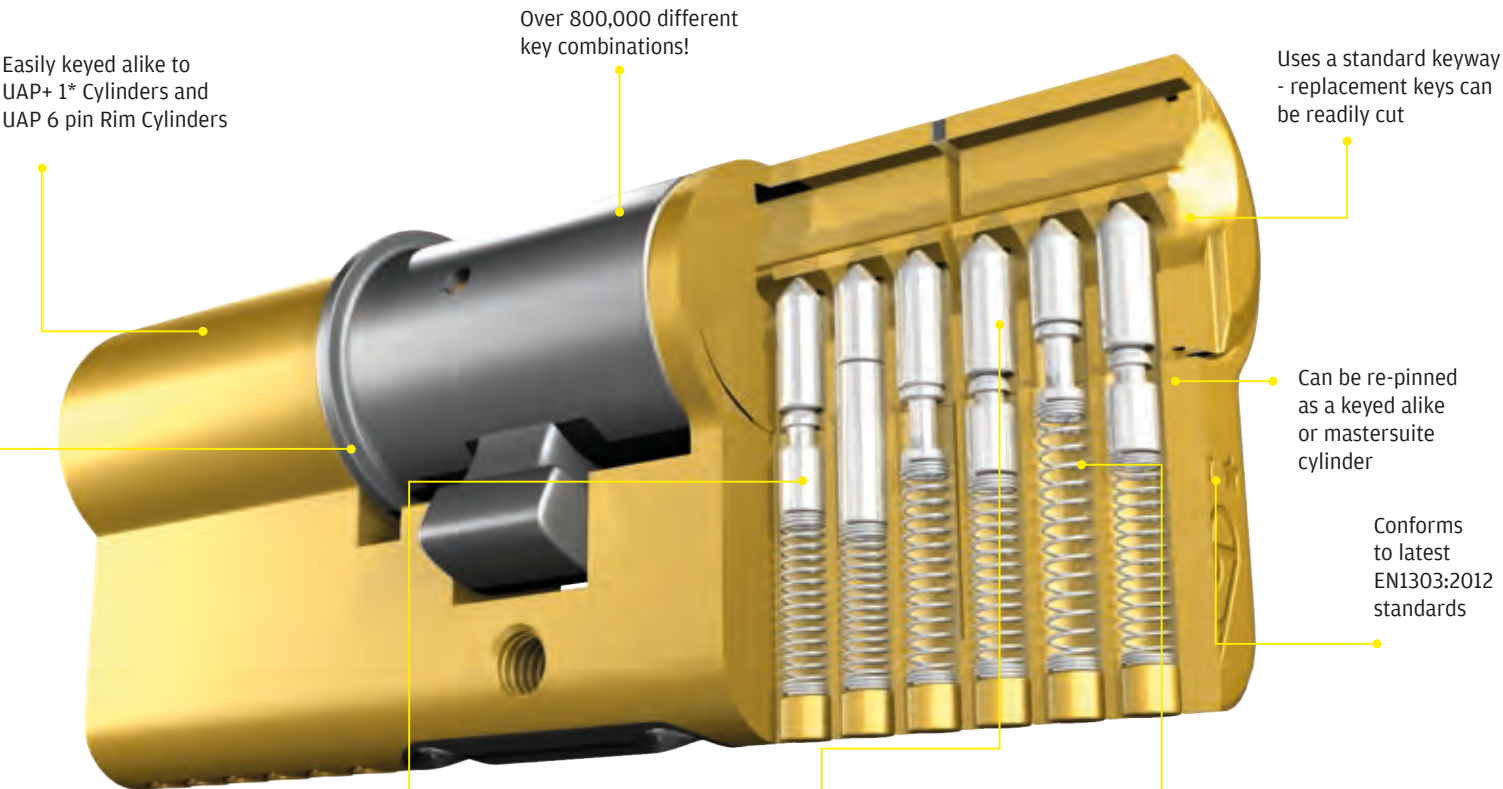

Comes with 1mm and 2mm Packers

UAP 3* Kinetica Cylinder Powered by Fullex

UAP and Fullex have joined forces to launch our very own 3* Kitemarked Cylinder - Kinetica. The 3* cylinder market has been growing over the last 12 months or so with fabricators understanding the consumer need for greater door security without having to upgrade handles or add extra security devices. UAP and Fullex worked together to try and develop the best value for money 3* cylinder on the market.

Easily keyed alike to UAP+ 1* Cylinders and UAP 6 pin Rim Cylinders

Over 800,000 different key combinations!

Uses a standard keyway - replacement keys can be readily cut

Can be re-pinned as a keyed alike or mastersuite cylinder

Conforms to latest EN1303:2012 standards

ANTI SNAP

Patent applied for anti tilt mechanism - In normal anti snap cylinders once a cylinder is snapped at the outside end, the inner section is heavier and will tilt allowing the burglar a small gap to gain access to the bolt. But the Fullex anti tilt ring stops this happening.

ANTI BUMP

Patented anti-bump timing pin system – This very clever system uses nickel plated hardened steel key pins and driver pins to interrupt the timing of the pins when bumped, and it is highly effective.

ANTI DRILL

4 x hardened steel anti-drill pins are in each side of the cylinder. Plus all moving pins are nickel plated hardened steel 50 HRC minimum.

ANTI PICK

Minimum of 3 anti-pick pins in each side of the cylinder makes it extremely difficult for a common burglar to pick the cylinder.

UAP+
Zerolift Advance
Cylinders

The UAP+ Cylinder is the best choice for inexpensive home security installation. Created in accordance with the British Standards KM561977, and also awarded the "Secured by Design" approval by the Association of Chief Police Officers, the high quality 6 pin Kitemarked Euro Cylinder can be fitted to any external door in order to ward off criminals that attempt to use the most popular break-in methods.

The cylinders have been tested to EN1303:2005, and is also 1 hour fire resistant! Each cylinder is packed full of security features, and is part of UAP's super smooth cylinders using the Chris Belcher designed anti-bump timing pin system. This very clever system uses nickel plated hardened steel key pins and driver pins, which gives the anti-drill feature we wanted to incorporate.

The Patented timing pins are designed to interrupt the timing of the pins when bumped, and it is highly effective. And because we use special pins rather than trap pins, we do not have a high expense to get this anti-bump feature! The timing pins also have inbuilt anti-picks, and mushroom driver pins, which makes them highly effective against picking.

We have in-house locksmiths which offer you the option to have keyed alike cylinders, or create customised and complex mastersuite systems.

Take a look at some of the secure safety features of the UAP+ euro cylinders:
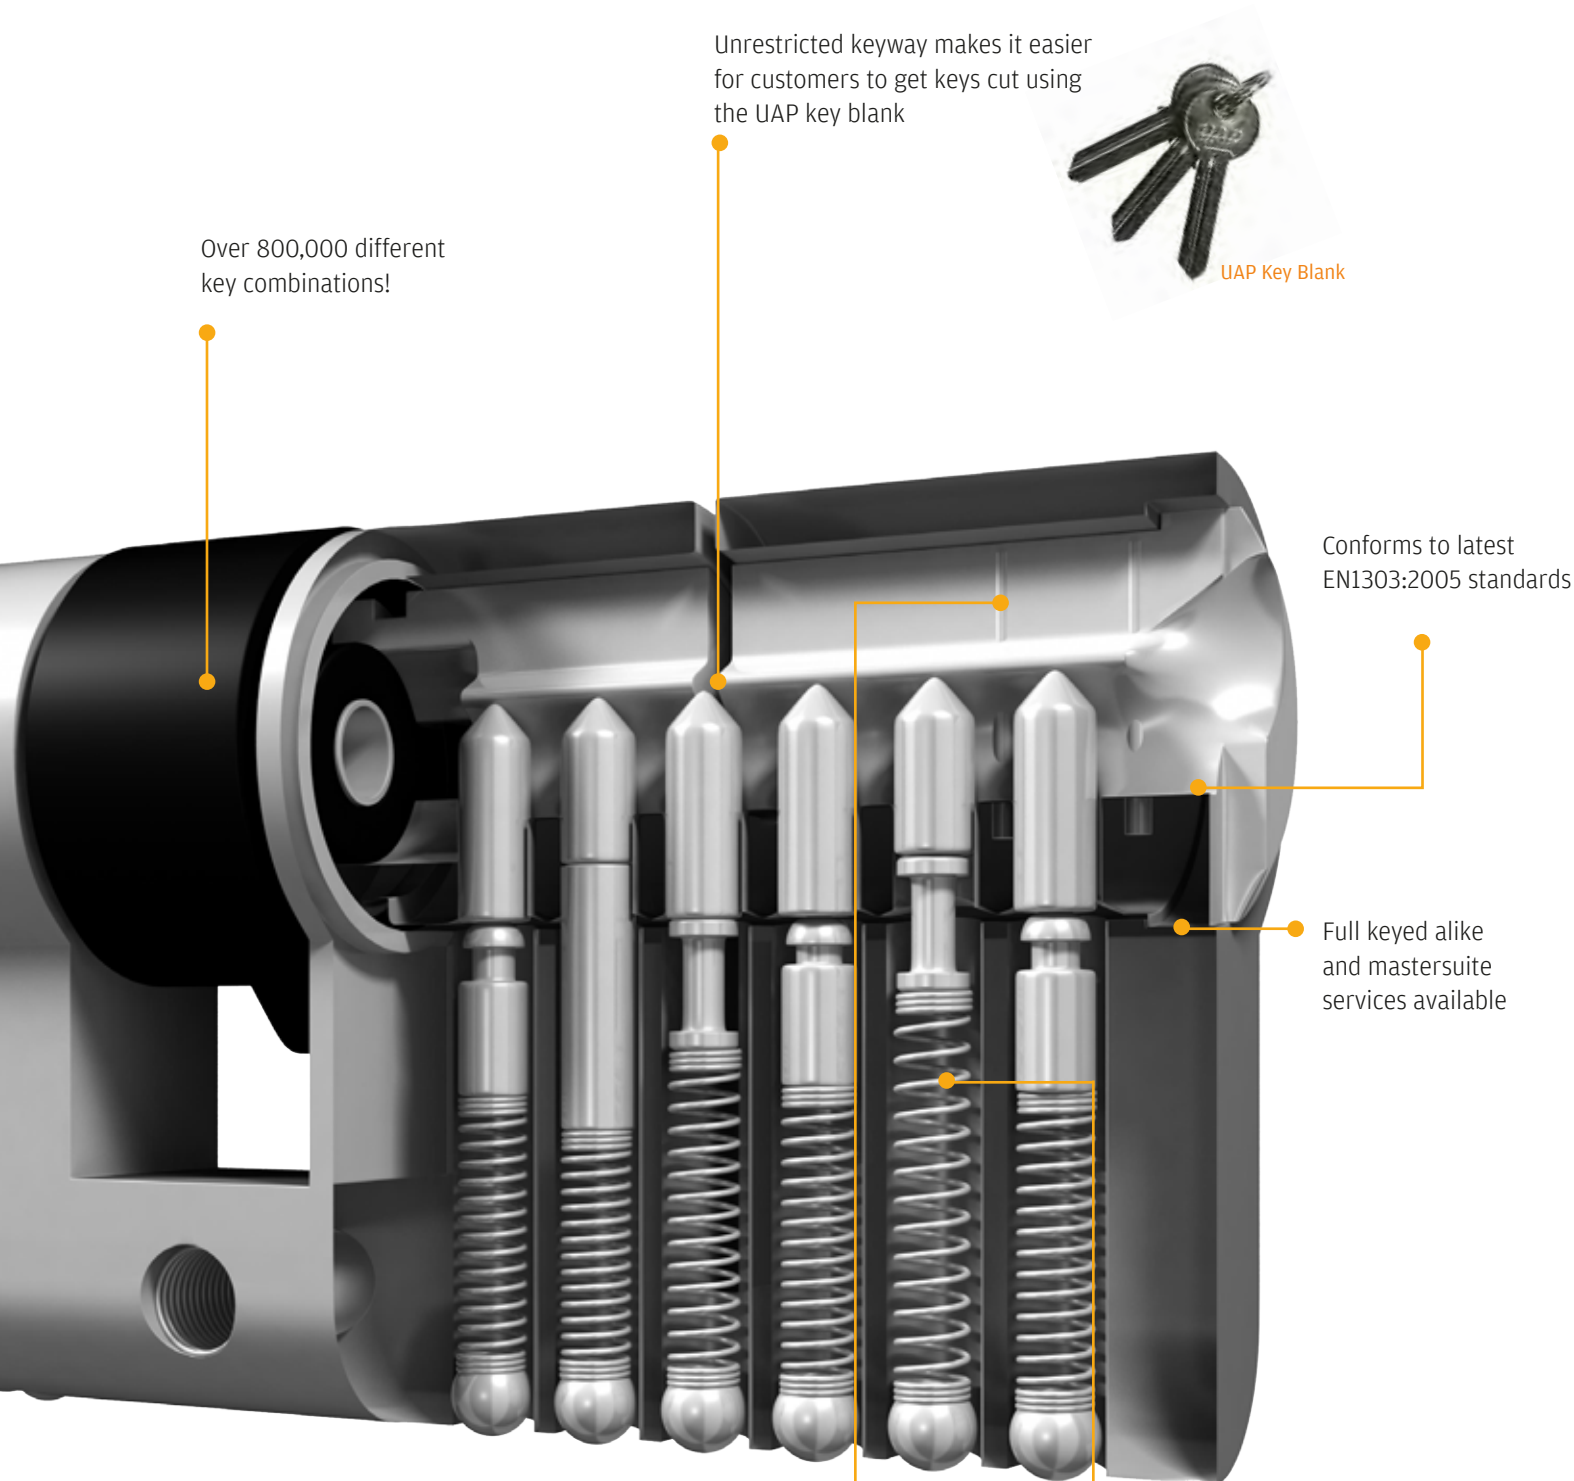

Available with
a removable thumbturn
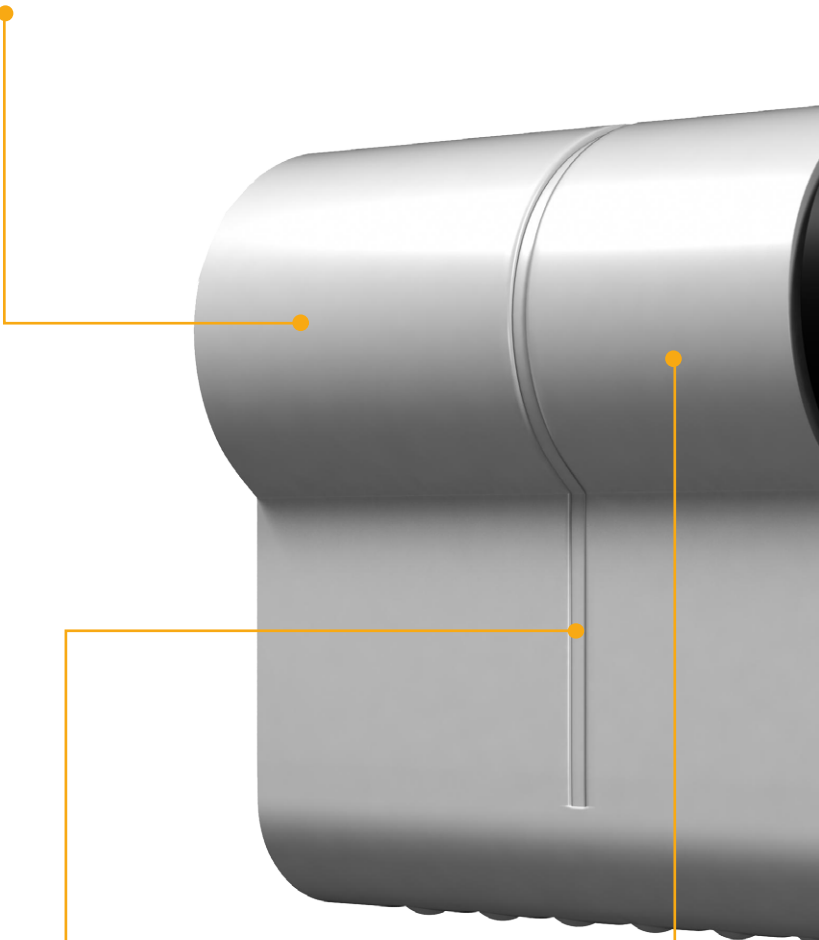

SACRIFICIAL CUT

The cylinder has a Sacrificial cut on each side, so when force is applied to either end, the cylinder will break away to the sacrificial cut line only, leaving the remaining cylinder operational and the locking mechanism intact.

Unrestricted keyway makes it easier for customers to get keys cut using the UAP key blank

UAP Key Blank

Over 800,000 different key combinations!
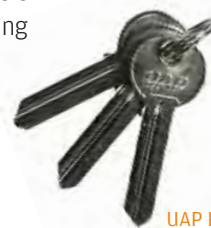

Conforms to latest EN1303:2005 standards

Full keyed alike and mastersuite services available

ANTI BUMP

The cylinder has a unique and patented anti–bump system which does not use trap pins. This system makes the turning of the cylinder key extra smooth.

ANTI DRILL

7 x hardened steel anti–drill pins are in each side of the cylinder. Plus all moving pins are nickel plated hardened steel 50 HRC minimum.

ANTI PICK

Minimum of 3 anti–pick pins in each side of the cylinder makes it extremely difficult for a common burglar to pick the cylinder.
